December 15, 2008

FOR IMMEDIATE RELEASE:

Case Medical announces a major breakthrough in sterilization technology.

On December 5, 2008 Case Medical received FDA 510k clearance for its SteriTite sealed container system and MediTray products. The new application included use in STERRAD 200, STERRAD NX, TSO3 ozone 125L, and pre vacuum flash sterilization using our disposable filter.

Case Medical was previously cleared for pre vacuum and gravity steam sterilization, ETO, STERRAD 100, 100S, and sealed flash using its FlashTite valve plate. Case Medical now offers a universal sterilization system that is compatible with all current methods of sterilization including steam as well as low temperature.

Importantly, our container system is ideal for standardization as the same container is fully compatible and validated with all current sterilization methods.

Furthermore, the SteriTite container system meets sterilizer manufacturers' recommendations for processing of surfaces as well as lumens, including rigid and flexible endoscopes. Case Medical has continued to offer the healthcare community innovative and cost effective sterilization solutions that are ideal for standardization.

Based in Ridgefield, New Jersey, Case Medical, Inc. is the leader in advanced container system design. An acknowledged innovator, educator and custom manufacturer, Case Medical, is committed to developing, manufacturing and implementing the industry's safest and most effective sterilization systems. The company has numerous GPO contracts including Novation, Med Assets, Broadlane, Health Trust Purchasing Group, Premier and VA/FSS/GOV for sterilization containers. And has contracts for its line of ready to use and super concentrated instrument cleaners. Case Medical has validated its products in independent laboratories and university studies to achieve a 6 log reduction in bioburden and a >99.9% reduction in organic soil.

For more information, including test results, contact Lydia Kasani at Case Medical at 888-227-CASE, ext. 206.
